

Your Fleet Digitalisation Score

77/100

Your digital maturity level:

Advanced Fleet Operations

Your fleet operations are highly digitalised, with strong visibility, connected workflows, and reduced dependency on manual coordination. Most routine processes are handled efficiently through data, automation, and shared operational systems.

These areas currently need the most attention:

Operational decisions rely on manually collected information

Reporting and analytics are not yet fully integrated into daily operations. As a result, managers spend additional time gathering information before making operational decisions.

RECOMMENDED IMPROVEMENTS

- ✓ Centralise operational reporting
- ✓ Improve access to real-time fleet data
- ✓ Reduce manual report preparation

RELEVANT MAPON SOLUTIONS

- ✓ Reports and dashboards
- ✓ Operational analytics
- ✓ Real-time fleet data

Limited visibility into fuel usage and driving habits

Fuel management and driver performance monitoring still require significant manual investigation. This makes it difficult to identify inefficiencies, unusual fuel usage, or risky driving behaviour early.

RECOMMENDED IMPROVEMENTS

- ✓ Automate fuel reporting
- ✓ Improve visibility into fuel discrepancies
- ✓ Use driver behaviour data for coaching and efficiency improvements

RELEVANT MAPON SOLUTIONS

- ✓ Fuel monitoring
 - ✓ Fuel integrations
 - ✓ Driver behaviour analysis
-

Want to make your fleets more digitally mature and efficient? Mapon is always there to help!

Get in touch with our team and we will find the right solutions for your fleet.
